The present sequence represents a secreted protein. The polynucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although osupporting data is given. Suggested activities include nutritional activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-infilanmatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity (no data is given in the specification to support these activities). The polynucleotide is also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LEWKKLGRSVSFVYYQQTLQGDFKNRAEMIDFNIRIKNVTRSDAGKYRCEVSAPSEQGQN 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                         The sequence represents a human junctional adhesion molecule 2 (JAMZ). The polynucleotide encoding the polypeptide is useful for recombinant production of JAM-2 protein, which in turn is useful for the production of antibodies. The antibodies may be used for probing cellular localisation and/or expression of JAMZ in tissues under normal and disease states, for immunoprecipitating JAMZ protein from cells and/or stroke tissues to determine whether it is modified by glycosylation and phosphorylation, and for determining JAMZ function. The antibodies inhibit interaction of JAMZ with inflammatory cells or influences their paracellular migration, and is therefore useful for alleviating plantal inflammatory diseases such as arthritis, asthma, rheumatoid arthritis, inflammatory bowel disease and Crohn's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, cytostatic, antirheumatic, antiarthritic, vulnerary; analgesic, antinflammatory; antibacterial; immunosuppressive; antiparkinsonian; neuroprotective; noctropic; osteopathic; haemostatic, vasotropic; antiulcer; fungicide; antidiabetic; antiasthmatic; antiallargic; immunostimulant; antidaratic; secreted protein; transmembrane protein; cytokine; cell proliferation; cell differentiation; autoimmune disease; stem cell; growth factor; nervous system disease; neuropathy; Alzheimer's disease; parkinson's disease; huntington's disease; osteoporosis, severe combined immunodeficiency; SCID; infection; multiple sclerosis; rheumatoid arthritis; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary deoxyribonucleic acid (cDNA) inserts (II), where the protein is subsentially free from other mammalian proteins. (I) are useful for preventing, treating or prevention of tumours. (I) are useful for preventing, treating or prevention of tumours. (I) exhibits activity relating to angiogenesis, or prevention of tumours. (I) exhibits activity relating to angiogenesis, or tumour of tumours. (I) exhibits activity relating to angiogenesis, or the useful proliferation, cell differentiation, antihilammatory, stem cell growth factor activity and activin or inhibin-related activities. (I) can be used to manipulate stem cells in culture to give rise to neurophichelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental cange or research no ferve and brain tissue and is useful for the treatment of genetic disorders in ervous system diseases and neuropathies, such as lateral sclerosis. (I) is involved in chemotactic or chemokinetic activity, regulation of hase manipulate the disorders contained in tissue expend in chemotactic or chemokinetic activity, regulation of hone, cartilage, tendon, ligament and/or nerve tissue growth and in tissue repair, healing of burns, incissons, ulcers, for treating osteoporosis, osteoarthritis, bone degeneration or periodental disease. (I) is also useful for gut protection or periodental disease. (I) is also useful for gut protection or fungal infections, in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, cubenes as the machinal pravers, allergis, reperfections and conditions, such as asthma or other respiratory problems. (II) is useful to express recombinant protein, as markers for tissues and incentions and conditions, sequence is that of a polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis.
                                                                                                                                                                                                                                                                                                                                            Evans C;

The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1031 genes up-regulated in acute lymphocytic leukemia.) ACC75641 to ACC72860 represent cancer related gene nucleotide sequences which encode the proteins given in ABRSSASI to ABRSSAGOS Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4), (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a patient by administering to the patient the antibody above; and (7) a chargette tragets. In particular, the nucleic acid is useful for therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            are up-regulated or down-regulated in cancers, useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New genes that are up-regulated or down-regulated in cancers, useful a markers for diagnosing e.g. cancer, ischemia or heart diseases, or as therapeutic targets for screening drugs for treating these diseases.
                                                                                                                                                diagnosis; screening; modulator; leukaemia; ischaemia; atherosclerosis; endometriosis.
                                                                                                                Human vascular endothelial junction-associated molecule protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Aziz N, Gish KC, Hevezi PA, Mack DH, Wilson KE;

This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fo portion (e.g. AAV34277) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 28 novel genes and their fragments (nucleic acid sequences AAV34286-V34325; amino acid sequences AAV34286-V34325; amino or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypucleotides. Specific uses are described for each of the 28 polynucleotides, based on which tissues they are most highly expressed in (see AAV34286 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IAAVVVVALVISVCGLGVCYAQRKGYFSKETSFQKSNSSSKATTMSENDFKHTKSFII 298
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; immunodeficiency; X-linked agammaglobulinaemia; septic shock; autoimmune disorder; rheumatoid arthritis; multiple sollerosis, cancer; grave's disease; diabetes mellitus; haematopoietic disorder; stroke; respiratory disorder; asthma; allergy; gastrointestinal disorder;

AAD44616-AAD44676 represent cDNAs corresponding to 28 human secreted protein genes, and AAE2699-AAE2699 represent the proteins they encode. AAE27000-AAE27025 represent human secreted protein fragments or their variants. The secreted proteins and genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed and include everloping products for the diagnosis or treatment of immunodeficiencies, e.g., x-linked agammaglobulinamina E cell immunodeficiencies, severe combined immunodeficiencies, autoimmune disorders e.g., systemic lupus erythematosus, rhoumatoing arthritis, multiple solarosis, autoimmune thyroiditis, autoimmune haemolyric anaemia, Goodpasture's syndrome, Grave's disease, diabetes mellitus, dermatitis, inflammatory conditions
         Parkinson's disease, Alzheimer's disease, cardiovascular disorder, atheresoclerosis, myocarditis, renal disorder; fungicide, virucide, hyperproliferative disorder; acute glomerulonephritis; tonsilitis; respiratory disorder, rhinitis; sinusitis; neurological disease, endocrine disorder, Addison's disease, reproductive system disorder; endometriosis; vasotropic; vulnerary; cytostatic; nootropic; cardiant; anti-HIV; tranquilliser; gout; antiparasitic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human secreted polypeptides and polynucleotides for diagnosing, preventing, treating immune, hyperproliferative, cardiovascular, neurological, reproductive disorders and identifying modulators of therapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Li Y, Zeng Z, Kyaw H, Fischer CL, Li

Abb44864-AAD44984 represent cDNAs corresponding to 28 human secreted corresponding to 28 human secreted corresponding secreted protein tragments. The genes cand their corresponding secreted proteins are useful for preventing. The genes and their corresponding secreted proteins are useful for preventing. Creating or ameliorating medical conditions, e.g., by protein or gene therappy. Secreted protein sequences of the invention are useful for the diagnosis or treatment of disorders such as autoimmune diseases (e.g. rheumatoid arthritis), hyperproliferative disorders (e.g. neoplasms of the breast or lives), oerebrovascular disorders (e.g. cerebral ischaemia, angiogenesis), cardiovascular disorders (e.g. cerebral ischaemia, angiogenesis), cardiovascular disorders (e.g. cerebral ischaemia, system disorders (e.g. Alzheimer's disease), infections caused by fungi, bacteria and viruses and ocular disorders (e.g. corneal infection). The polypetides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs to regenerate tissues and in chemotaxia. They can also be used as food additives or preservative to increase or decrease storage capabilities, and other nutritional components. The present sequence represents a human secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nucleic acid molecules encoding 28 human secreted proteins, useful diagnosing, preventing, treating or ameliorating medical conditions as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 99.7%; Score 1517; DB 5; I

The present invention relates to novel human secreted proteins (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary arreitosclerosis and myocardial ischaemia), neural disorders, immune arreitosclerosis and myocardial ischaemia), neural disorders, immune astrointestinal disorders, reproductive disorders, gastrointestinal disorders, reproductive disorders, for wound healing and epithelial cell prolliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating neural damage which occurs in neuronal disorders or neurodegenerative conditions such as Alzheimer's disease and Partinson's disease, to enhance bone and periodontal regeneration and aid in tissue transplants or bone graffs, to prevent skin aging or hair loss, to etimulate growth and differentiation of haematopoietic cells and bone marrow cells when used in combination with other cytokines, to maintain or grans before transplantation or for supporting cell culture of primary

AB271190-AB271478 represent CDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP00299 represent the proteins they encode. Sp271479-AB2714740 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening, and recombinant to vectors and host cells comprising a nucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing dispetive disponders. Such conditions include disorders of the mouth, osophagus, scoreted proteins and include cancers of these organs and tissues. The creat and pancreas, and include cancers of these organs and tissues. The treatment of immune disorders, inflammation, infection, treatment of immune disorders, and to promote wound healing. Nucleic acids of the invention may be used for chromosome identification, chromosome mapping, in gene therapy, for identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight conserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Secreted protein; immunodeficiency; multiple sclerosis; severe combined immunodeficiency; autoimmune disorder; cancer; rheumatorid arthritis; diabetes mellitus; haematopoietic disorder; inflammatory condition; septic shock; haematory bowel disease; crohn's disease; respiratory disorder; asthma; allergy; stroke; gastrointestinal disorder; central nervous system disorder; stroke; laschaemic brain injury; neurodegenerative disorder; Parkinson's disease; Alzheimer's disease; cardiovascular disorder; atherosclerosis; blood-related disorder; thrombosis; atherosclerosis; renal disorder; blood-related disorder; acute glomerulomephritus; Addison's disease; endocrine disorder; liver disease; pancreatic disorder; vaccine; wound repair; angiogenesis; lymphatic disorder; bair loss; body weight;

The invention relates to an isolated polypeptide comprising an amino acid sequence at least 95% identical to sequence of 20 human secreted proteins, their fragment, polypeptide domain, epitope, secreted form, variant, allelic variant, or species homologue, or the encoded sequence included in ATCC 97921 and 97922. Also included are the encoding nucleic acids, recombinant vectors, host cells, antibodies, and genes. The proteins and nucleic acids are useful for diagnosing, preventing, treating, prognosing or ameliorating a medical condition e.g. immunodeficiencies, severe combined immunodeficiencies, severe combined immunodeficiencies, severe combined immunodeficiencies, autoimmune thyroidiis, autoimmune haemolytic anaemia, a cellar sorders (e.g. systemic erythematosus theumatoid arthritis, multiple sclerosis, autoimmune thyroidiis, autoimmune haemolytic anaemia, coodpastur's syndrome, Grave's disease, diabetes mellitus, dermatitis), haematopolietic disorders, inflammatory bowel disease, Crohn's disease), reperfusion injury inflammatory bowel disease, Crohn's disease), respiratory disorders (e.g. gastric, ovarian, lung, bladder, liver and broadcres (e.g. gastric, ovarian, lung, bladder, liver and breast), cancers (e.g. gastric, ovarian, lung, neurodegenerative disorders (e.g. Parkinson's disease and Alzheimer's disease, AlDS-related dementia, and prion disease), cardiovascular disorders (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human secreted polypeptides and polynucleotides for diagnosing, prognosing, preventing and treating immune, hyperproliferative, liver, kidney, reproductive disorders and for identifying modulators of therapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Zeng Z, Kya

The invention relates to isolated nucleic acid molecules ADB91065-ADB91948 and ADB9185-ADB91911 encoding human secreted proteins ADB91449-ADB9191911 encoding human secreted proteins ADB91449-ADB9191911 encoding human secreted proteins ADB91449-ADB91844. Also disclosed is a recombinant vector comprising a public of the invention, and second of the invention is useful in identifying a binding partner by contacting the polypeptide with a binding partner, and determining whether the binding partner increases or decreases activity of the polypeptide. The polypeptide, polypept
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò

The invention relates to a novel human secreted polypeptide comprising a defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnosing or treating a hammonion of treating a hammonion and an anaemia, autoimmune disorders such as rheumation for a snaemia, autoimmune disorders such as rheumation, forwer's disease, systemic lupus erythematcous or glomerulonephritis, neurodegenerative disorders including Parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including a catherosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide may also be used during gene therapy procedures and for identifying a binding partner by contacting the pulypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide. The current sequence is that of the human secreted protein of the
                                                                                                                                                                                                                                                                                                                                                                                                    New human secreted polypeptide for diagnosing, preventing or treating hematopoietic or hematologic disorders (e.g. anemia), autoimmune disorders (e.g. diabetes) or hyperproliferative disorders (e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MARRSHHRLLLLLLRYLVVALGYHKAYGFSAPKDQQVVTAVXYQEALLACKTPKKTVXSR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of nove; proteins from a variety of organisms, including human, dog, cat, horse, cow, pigl, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs from the organism of interest. They can be used in diagnostics, forenments, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MARRSRHRLLLLLLRYLVVALGYHKAYGFSAPKDQQVVTAVXYQEALLACKTPKKTVXSR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises the DNA and protein sequences of the extracellular region of human junctional adhesion molecules (huJAM). The extracellular huJAM DNA and protein sequences are useful in the treatment of: immune system disorders (e.g. immune deficiency); autoimmune disorders; inflammatory disorders; cancer; wound healing; or a cardiovascular disease. The present amino acid sequence represents the full-length membrane-bound huJAM2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New extracellular human junctional adhesion molecule (huJAM) polypeptide, useful for treating an immune system disorder such as an immune deficiency or an inflammatory disorder, cancer, wound healing, or a

The specification describes A33 related antigens PR0301, PR0362 and PR0245. The methods and compositions of the invention are useful for the treatment and diagnosis of inflammatory disease and tumours in mammals. Such inflammatory diseases include of inflammatory bowel disease.

Such inflammatory diseases include of inflammatory bowel disease.

Systemic lugues erythematosis, rheumatoid arthritis, juvenile chronic arthritis, spondyloarthropathies, systemic solvenderma, includent or systemic vaculitis, sarcoidosis, autoimmune hemolytic alopathic inflammatory myopathies, dermatomyositis, polymyositis, slogicen's syndrome, systemic vaculitis, sarcoidosis, autoimmune hemolytic autoimmune thrombocytopenia, idopathic thrombocytopenia immune-mediated thrombocytopenia, introductis, draves a disease, Hashimoto's thyroiditis, invenile lymphocytic thyroiditis, draves attophic thyroiditis, diabetes mellitus, immune-mediated renal disease, glomerulonephritis, thyroiditis, demylalmating diseases, didiopathic peripheral nervous systems such as multiple sclerosis, idiopathic peripheral chrosis, granulomatous hepatitis, sclerosing cholangitis, primary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory and fibrotic lung diseases, gluten-sensitive enteropathy,
